## Package Contents

Once you download package ZIP file, you'll have all files you need inside. Package contains the following:

- 1) Agenta.zip contains Agenta theme
- 2) Agenta-child.zip contain Agenta's child theme to enable edit of template without need to touch original files
- 3) License folder – all files and plugins provided inside of template are licensed properly.
- 4) WP Bakery Visual Composer and Ultimate Addons for Visual Composer plugins – this plugins are included within main template files and you'll see instruction to activate them once you install template.

## Getting started by knowing features

Agenta template have various features which we will list most important features here.

### Real Estate plugin

Agenta's real estate plugin is integrated and build along with template. It is polished by review of real world requirement of real estate businesses. It allow multiple agents to post contents and admin to review contents.

The screenshot shows the WordPress admin dashboard with the 'Properties' menu highlighted. The main content area displays a table of real estate listings with the following data:

Thumbnail	Title	Price	Location	Property Type	Contract Type
	Warm and quite	700000	Sydney	Villa	For Sale
	Best Deal Pre Sale	500000	Florida	Villa	For Sale
	Regalia Inside View	700000	Kuala Lumpur	Apartement	For Sale
	London	2000	London	Storey	For Rental

### Agents Quick Form

When defining an agent, you can enter their contact information (including email address) and then enable Quick contact form for that agent.

The screenshot shows the 'Agencies Options' form with the following fields and values:

- Ownership: Agent
- Agent Name: Armin
- Agency Name: San Arena
- Phone: +1 800 000 0000
- Mobile: (empty)
- E-mail: sanarena@gmail.com
- Skype: (empty)
- URL: http://sanarena.com/
- Enable quick contact form:

Agent quick contact form must be enabled in theme options.

It will show an integrated contact form under each property from that agent and allow direct contact from customers. It is integrated with reCaptcha anti-spam feature.

This is bundled inside of Agenta and don't need any additional plugins.

Contact Armin

Your name

Your email

Your contact number

Your message

Send

## Contract Types

Agenta allow you to add unlimited number of different contract types with their own specified settings.

Each contract type can have its own price range and it will be shown with different color in map.

If you set a contract as monthly, it will add monthly label to prices for properties under that contract.

If you set a contract as daily, it will add daily label to prices for properties under that contract.

You cannot have both daily and monthly under same contract type.

Agenta Real Estate Premium Template

Contact

Parent: None

Description

The description is not prominent by default; however, some themes may show it.

Price From: 200

Enter minimum price value for this contract type to show in search box

Price To: 1000

Enter maximum price value for this contract type to show in search box

Monthly:  Is it a monthly price based contract?

Daily:  Is it a daily price based contract?

Update

## Properties Search Form

Search form can be enabled via Visual Composer's widget and WordPress's sidebar widgets. You have options to enable/disable filters on this form such as furnishment and area size.

Price range of search form use price range values specified in Contract type. You can change price range slider to dropdown box using theme settings.

Search listings

## Color Schemes

You can change color schemes easily using one click in theme options, styling options.

## Loan Calculator associated with listing prices

Agenta is first in its own group that enabled smart loan calculator which apply entered values into loan calculator into search listing and calculate monthly loan price for each unit in listing search.

The screenshot displays a real estate website interface. At the top, there is a map showing the North Atlantic Ocean and surrounding regions. Below the map, the 'Properties' section features a grid of six property listings. Each listing includes a 'Discounted' badge, a 'For Sale' or 'For Rental' label, a price, a monthly payment, and icons for bedrooms and bathrooms. A red arrow points to the 'Best Deal Pre Sale' listing, which has a price of \$500,000 and a monthly payment of \$1,797/mo. To the right of the listings is a 'Loan Calculator' form with fields for 'Price of the Property' (500000), 'Terms of Loan (yrs)' (30 yrs), 'Interest Rate (%)' (5.99), 'Down Payment' (200000), and 'Monthly Payment' (1797). A blue button labeled 'Associate with properties' is located at the bottom of the calculator.

## Agenta's Photo Gallery

You simply add photos into gallery using WordPress's native gallery feature, and Agenta will apply sleek theme to it.

## Visual Composer and Ultimate Addon Plugin for Visual Composer (\$34 Value!)

This two premium plugins are integrated into Agenta template for free. You can easily develop your website using drag and drop. You don't need API code for updates as we will update it with each release for you.

## Agenta's shortcode modules for Visual Composer

We have added our main functions as visual composer module to enable easy page building using Agenta tools.

## Agenta Widgets

Various theme specific widgets have been added to WordPress.

<b>Agenta: Agents</b>	<b>Agenta: Contact Card</b>
Agenta: Agents	Agenta: Contact Card
<b>Agenta: Featured Properties</b>	<b>Agenta: Loan Calculator</b>
Agenta: Featured Properties	Agenta: Loan Calculator
<b>Agenta: Properties Search</b>	<b>Agenta: Recent Posts</b>
Agenta: Properties Search	Agenta: Recent Posts
<b>Agenta: Recent Properties</b>	<b>Agenta: Social Links</b>
Agenta: Recent Properties	Agenta: Social Links

## Energy Consumption Level

They are mandatory for some EU countries and we support it. Simply fill up number when adding a property and Agenta will generate energy level chart. Leave fields empty and this chart will hide.

## reCAPTCHA Spam Protection

We protect agent's quick contact form using Google reCAPTCHA spam blocker.

## Rubber Stamp Mark

You can mark properties as SOLD, PROMO, RENTED, ... by putting a mark over each listings. This is very customizable and allows you to manually edit and enter any text you want to show.

It is available when adding/editing properties.

## Theme Options Customizing

Agenta uses a user-friendly customizer for all template settings.

You can upload logo, change texts, disable and enable various functions such as Top Sliding bar, map and ... using this section.

## Google Fonts

You can choose typography from huge list of Google font's database. Font will be loaded on user browser directly from Google's servers, thus increase speed of loading while enabling you to use custom fonts.

## Multi User and Multi Agent

You can define new agents in Users section of WordPress, upload their profile photo and define a login password for them so that they can publish their own properties. You can enable admin review in theme options to review each property before publishing on live website.

## Agenta Page Options

These settings are present when you are trying to edit or add a new page. You can hide title, sidebar and more. If you don't see this option, look in Screen Options on top right of screen and enable it.

## Top Widget Slider

You can enable/disable this feature using theme options. It will allow you to add a widget enabled sliding area on top of all your pages.

## Valid Responsive HTML5/CSS

Agenta has been tested against W3C Validator and it is developed based on Bootstrap 3 framework for maximum compatibility with modern devices.

## Retina Ready

Template will detect high resolutions and load high quality pictures for logo and it is using Font Awesome Icons for vector based high quality.

## Icon enabled facilities

We have integrated more than 60 home, hotel and appliances icons into facilities section. You can submit a request for us if you cannot find what you are looking for and we will add it to our next version release.

## Font Awesome Integration

We have integrated Font Awesome with Ultimate Addons of Visual Composer and enabled easy to use icon manager:

## Theme Installation

Please install Agenta to be to use it in your WordPress website by using following instruction.

First of all, you must have a WordPress website already setup. If you need help on installing WordPress, you can follow official WordPress guide here: [http://codex.wordpress.org/Installing\\_WordPress](http://codex.wordpress.org/Installing_WordPress)

To install the template and make template ready to use, you have to follow few steps.

### 1. Upload Template into your WordPress

You can follow two different guidelines for it. FTP or WordPress Upload method.

First we mention WordPress upload method since it is easier to follow. In case your WordPress shows an error, then you must follow FTP method.

### WordPress Upload

1. Login to your WordPress Admin
2. Navigate to Appearance > Themes
3. Click Add New button.

4. Click Upload Theme button.

5. Choose Agenta.zip file on your computer and Click Install Now. Theme will be uploaded.
6. Navigate to Appearance > Themes and activate installed theme.

## FTP Method

1. Unzip agenta.zip file
2. Login to your website's FTP server.
3. Open /wp-content/themes/ in your WordPress installation folder.
4. Upload extracted Agenta theme folder into themes folder of your WordPress installation.
5. Login to your WordPress Admin
6. Navigate to Appearance > Themes and activate installed theme.

## 2. Enter your Agenta License Code to receive regular updates

Make sure your current version of Agenta is most recent and stay up to date. Please enter your license code that you received upon purchase into "Properties -> Setting -> General"

## 3. Install Provided Plugins

Once you activate template, you'll be asked to install integrated plugins. Please install recommended and required plugins before continue to next step.

## 4. Remove default widgets

Please navigate to Appearance -> Widgets and remove all default widgets that are added automatically by WordPress into your sidebars. You may go ahead and include all of your required widgets at this step.

## 5. Import Demo Contents

We have included the exported XML file from our demo; this allows you to quickly set up your theme the same way our demo site is setup. Please find XML file in XML folder (inside of Agenta theme folder) and use it. Follow steps below to import XML file.

1. Navigate to Tools > Import
2. Select WordPress and Install **WordPress Importer** Plugin, and Activate it.
3. Open WordPress Importer and choose XML file in xml folder of this template.
4. Click Upload file and Import and follow steps until files are imported.

It is recommended to Import media and attachments.

## 6. Activate WordPress Permalinks

This template use permalinks for User-friendly and SEO optimized keywords, you are required to active it to avoid getting 404 errors.

## 7. Set Static Home Page

Default WordPress setup shows latest blog posts, to make it show Properties and homepage text, you have to:

1. Go to settings > Reading
2. Change Front page to display static page: Homepage ( This value appear only after you import demo contents )
3. Change Blog to display: Blog ( This value appear only after you import demo contents )

## 8. Setup Menu

Please open Appearance > Menus and open Manage and select specified menu for each defined location.

In Edit menus, you can change menu items.

For Header menu, you can create Supermenu. To make a menu item to be **supermenu**, you have to add supermenu CSS class to the menu. If you cannot see CSS Classes field for menus, on top right of menu page click on Screen Options and enable CSS Classes.

Here is how we enabled supermenu for features menu in header:

In supermenu, first child will be label for the column.

## 9. Configure Widgets and menu if you haven't yet

Just drag and drop widgets into widget sections and enter information for each widget.

## 10. Input Your License and API codes

Go to Properties -> Setting and Enter your Agenta License Code which you received upon purchase. This code will allow you to automatically receive updates and bug fixes for Agenta.

On bottom of the page, enter your Google Map API code. This code will allow Google map to be displayed in your website (to show location of properties)

You need to enable following services for your Google Map API:

1. Maps JavaScript API: <https://console.cloud.google.com/apis/library/maps-backend.googleapis.com/>  
Allows Agenta to utilize Maps via JavaScript.
2. Maps Embed API: <https://console.cloud.google.com/apis/library/maps-embed-backend.googleapis.com/>  
Allows Agenta to embed map to your pages
3. Geocoding API: <https://console.cloud.google.com/apis/library/geocoding-backend.googleapis.com/>  
Allows Agenta to detect address you type and point location over the map.

## 11. Manage real estate default values

Please go to Settings under properties menu and enter your own customized information. Upload your logo (must be transparent) and your own desired configurations.

## Modify your pages texts

### Edit Pages

Navigate to Pages > All Pages and click Edit on the page that you want to edit.

1. Homepage:  
Homepage is like all other pages. We have used power of Visual composer to enable easy drag and drop builder for homepage.  
You can use Agenta Visual Composer widgets to drag and drop slider, map, search, loan calculator and other features.

## 2. Contact us page:

This page uses Contact form 7 plugin (or you can use any other plugin you wish) to enable contact form.

## Create Pages

To create a new page, Click Add new in Pages menu, and enter appropriate title and text.

You can use Visual Composer Drag and Drop page builder to generate unique pages.

## Management using Visual Composer

You can easily modify your pages using Visual Composer plugin. To activate editor mode, Please login to your WordPress admin first. Then open the page that you want to edit. By using Visual composer plugin, you no longer need to edit pages in admin dashboard. Simply open the page in browser and Look for WordPress admin menu.

Click on Edit with Visual Composer.

You can use tools provided in Visual Composer plugin to add new contents to your page, or drag and drop page items.

In this example, we will go into “Agenta” section to use one of the special contents provided by Agenta’s template:

In this example, we have choose Location Map. Configure settings and Save.

When you have finished editing contents, please click on Update to save contents.

## Managing Properties

### Setup your contract types

Under properties menu, click on contract types and verify that your real estate also offer same contracts. You can add or delete if desired.

Each of these contracts has a default price range (for example rental price range is from 400 to 3000)

You can change this defaults when you click on contract name there.

This contract types will have different color in map and price range will be used for search section.

## Setup locations

These locations will appear in search dropdown box.

Under properties, click on location and add desired locations to the list. You can add City and town as city's child.

## Setup your Agents

Enter owners and agents who you are going to put their profile online for your listings.

Click on Add new user under Users menu where you can add a new user to WordPress. Set their role to Agents &, enter their contact details if you want their contact detail to be shown in website and make sure to upload their profile photo by using provided photo section at bottom of form.

## Setup Buildings

This step is optional, but if you want to list few units inside of same building, you can use this feature of Agenta to make them searchable by unit.

You can choose agents who are active in this building, upload photos for photo slider and choose building's GPS location.

## Adding properties

Once template and WordPress are configured, it is pretty easy to add new properties.

Click Add New under properties.

Enter title and description.

Choose owner or agent for this property if you like it to show under the property page.

Choose building of property if you like customers to see other units in same building.

Enter Price without any currency sign and without any symbols and dots. Price would be configured to correct style automatically by Agenta. Price field should only contain numbers; otherwise your property wouldn't be searchable.

*Price format can be configured under Theme Options > Localization*

You can hide text on website by using Custom Price Text. You can type word in this field if you want to hide price.

You can change area size format to different definitions such as sq. ft, area, sq. meter, yard, hectares, acreage and more in Theme Options > Localizations

If deposit is required, you can enter it, otherwise leave this field empty.

If item is featured, it will be shown in homepage below the slider.

If Property has a Slider Image, it will be show on Main slider (the one that you can enable using Visual composer).

*Please make sure to use high quality and high resolution images for this field only. Images recommended being larger than 1300px wide.*

Images section is to setup slider inside of property page.

Make sure to choose a featured image on right sidebar as well. Featured image show in listings and searches.

Choose location on map

On right sidebar, please tick appropriate values for each field (location, facilities, contract types and property types). You can add new values for each on the fly, if your desired value isn't listed there.

Publish!

## **Gallery**

In Media section of each post and page and properties, you can create a gallery. Simply create a gallery using WordPress's native feature and Agenta template will apply style to it.

## A note about images

When you upload an image to your WordPress, it saves into Gallery.

To add image from your computer, click on Add Media button, in popup, select from Computer and drag drop your photos and click Insert.

To choose image from your gallery, use Gallery tab instead of clicking on “From Computer” and click on Show link in front of each image and click on Insert.

When inserting image, please make sure it is set to Full Size (for highest quality)

## Sliders

### Main slider

Main slider uses “Main Pages Slider Image” field of each property. It will show them in Main slider as long as you keep that photo in slider image field of that property or until new properties get added to the website.

Main slider can be activated using Agent’s Visual composer widgets and it is automatically populated.

### Items Slider

Buildings and properties have another photo slider to be set for each property. It will create a responsive slider in property/building page.

If there is no slider photo, map of building will move to top of the page.

## Map

### Homepage Map

Map can be added in homepage as well as all other pages using Visual Composer's shortcode. Map can be added by clicking Add Element, going to Agents category and choosing Locations widget.

### Map Settings

Map will be shown on search pages as well.

You can change setting for map such as its default location, default zoom or even completely disable it on search pages.

## Sidebar Locations

Generic Pages	Top Slider Widget 3
Post Pages	Top Slider Widget 4
Properties Listing Pages	Footer Widget 1
Property Detail Pages	Footer Widget 2
Top Slider Widget 1	Footer Widget 3
Top Slider Widget 2	Footer Widget 4

Agenta's template allows you to take control of your sidebars by providing sidebar for different sections.

### Generic pages

This is used in archive page, WordPress's default search page and Pages.

Please note that you can optionally turn off sidebar globally in theme option or individually in Pages.

### Posts Pages

This is used for blog posts pages.

### Properties Listing Pages

This is used in properties search page.

### Properties Detail Pages

This sidebar is used in description page of each property.

### Footer Widgets

As name suggests, you can put widgets in your footer area. Number of footer area widgets columns can be set in theme option.

### Top Sliders Widgets

There is a top slider in top right of your websites, once your visitors click on it; they will see another set of widget columns in top of your website.

### Shortcode

Agenta provided Shortcode by using Visual Composer plugin to enable easy management of pages.

## ★ Featured Properties

This shortcode display a list of featured properties. You can see an example at above picture. You can control it's layout in setting. (Grid and Rows)

## 🏠 Recent Properties

Same layout as featured properties, but it will show recent properties. You have option to make it show random properties as well.

## 🔍 Filtered Properties

Same as two of above, but with extensive filtering:

Filtered Properties settings
🔍 ✕

How many properties?  
 properties  
Enter number

Layout

Show properties randomly

Location

Building

Contract

Close
Save changes

## 📍 Locations Map

It has extensive filtering same as Filtered properties shortcode, but instead of showing properties in a grid or row, it will show them inside of a map. You can also enable search box over map.

## H1 | **Agenta Header**

To keep Agenta’s style intact on other pages, you can use this widget to make same header that we used on different places:

| Welcome to Agenta

## | **Agenta Main Slider**

Most popular section to use this widget is homepage on top of the page. It will show a large slider. You can enable/disable captions or search form over this slider or change their location and choose slider effect. Please choose photo in “Main page slider Image” when adding a new property for to choose photos for this widget.

## **Loan Calculator**

This widget will enable our loan calculator form. This form calculates in real time. You can enable search button for it, so that it will apply entered loan values into listing of properties and show calculated monthly loan price of each property.

Loan Calculator

Price of the Property:  
700000

Terms of Loan (yrs):  
30 yrs

Interest Rate (%):  
5.99

Down Payment:  
200000

Monthly Payment:  
2995

Associate with properties

## dsIDXpress

Agenta support standard dsIDXpress plugin for real estates. It means widgets and listings display in correct layout and stylesheet.

After you install and activate your dsIDXpress plugin, it will create a page with following URL: `/idx/` ([www.example.com/idx/](http://www.example.com/idx/)) on this page you'll see listings coming from their server.

For any inquiry about functionality of this plugin, please contact its own developers. Agenta provide support for dsIDXpress as integrating its current standard functions, but we are not able to change their functions.

## Migration from Agenta v1.1.x

We have revamped agenta's Agent system in v1.2

Older versions used custom post type as agent, but new system use WordPress users system for agents and landlords, therefore, your agents can have their own username and password to login and post their own contents. You can review this contents and publish them or you can enable auto publish in theme option. While we no longer support old agents system, we have provided a compatibility patch for those who don't want to migrate to new system for now, so you can enable classic agent patch in Advanced section of theme option, and your old agents will be showing. You might also need to check "Hide this agent information on property pages" in your main admin account, or other accounts if you used other accounts to submit properties to avoid showing double agents. But be aware that we no longer support old system and you no longer can edit or add new agents to old system. Please create each of those agents in WordPress Users section and choose that agent as property author for each property to be able keep up with our future updates.

## CSS Class names

There are few class names we have defined to make customization much easier. By default, Agenta put a shadow around all pictures, which is nice. But sometimes you might want a shadow-less photo frame.

When you insert a photo using Visual composer, you can add following class name as Extra class name, and voila! It will remove shadow: “noshadow”

There can be times where you want to drop a shadow for an element ( such as a row, text box ... ), you can use our defined CSS class for this: drop\_shadow

There is another CSS class which is only for “Rows”. If you specify pushmeup, it will remove row’s whitespace at bottom of the row.

## Translation and WPML

You can translate website to another languages using provided po files. To edit po files, you’ll need to use Poedit software: <http://www.poedit.net/> or similar softwares ( we recommend poeditor.com )

You must translate .po file using correct language code format. For example zh\_DE.po for german language. And convert it to mo file using poeditor applications. Then save both .mo and .po file and into their correct name. ( zh\_DE.mo and zh\_DE.po ) and finally copy language file into agenta theme's lang folder.

Please remember to open Settings > Permalinks and click Save every time you done translating, otherwise your pages might show 404 errors.

## WPML Support

If you have WPML CMS plugin and its String Translation plugin, you may use it to scan the template, and translate each word under tag of Agenta.

1. Navigate to WPML -> String Translation
2. Select text you want to translate and click on Translations on right side and Translate
3. Check the checkbox "Translation is complete" and Click Save.

You can enable WPML's menu which is integrated in Agenta's theme in theme option.

Agenta utilize built-in support for WPML language switcher widget. You need to enable WPML header menu in Theme options first, and then configure your WPML plugin as follow in WPML->Languages->Language switcher options and set **language switcher style** to **List of languages Horizontal**

## Font Awesome Integration

You can use Font-Awesome icon codes everywhere within your texts and pages. Please look at font-awesome gallery for list of icons and their code to use: <http://fontawesome.github.io/Font-Awesome/icons/> We have added facility to use these icons in your own pages by using Visual Composer Ultimate add-on.

# Trouble Shooting

---

Please contact us at [sanarena@gmail.com](mailto:sanarena@gmail.com) for every question you have regarding Agenta and we will do our best to answer to you within two days time.

Best Regards,  
Armin
